Architectural Spotlight

ChromaLuxe

ChromaLuxe is the world's leading manufacturer of high-definition sublimatable photo panels. The vibrant colors, unmatched durability, and striking metallic finishes make them a favorite for enhancing architectural features. From art displays in hotels and corporate lobbies to full paneled walls in commercial environments, ChromaLuxe adds modern refinement and visual interest to the space. No frame or protective glass is needed for the panels, allowing for seamless integration into the architectural design.

THE LUXE FACTOR

The stunning 3D color depth of ChromaLuxe prints comes from infusing the image directly into the specially coated surface of the panels through our dye sublimation process. The exceptional detail and show-stopping resolution of the print delivers the high end, luxury impression that sets ChromaLuxe media apart. The modern aesthetic of metallic panels is favored among interior designers and architectural trendsetters.

BEAUTY IN PRACTICALITY

The proprietary coatings on ChromaLuxe panels make them moisture and fade resistant, scratch resistant, chemical resistant, and even fingerprint resistant, so they retain their vibrancy longer. In addition to their unmatched durability, the surface is also resistant to all forms of chemicals, bacteria*, contaminants, and pathogens, making ChromaLuxe print media an ideal choice for maintaining hygienic and safety requirements in heavily trafficked areas. Ideally suited for both indoor and outdoor display, incorporating an extra wow factor into architectural features has never been easier or more practical.

SHOWCASE YOUR SPACE

ChromaLuxe not only delivers breathtaking images on their award-winning metallic panels, but also on wood, tempered hardboard, tabletops, and even flooring. Infusing logos and corporate imagery into countertops, walls, or floors is an exciting new way to add branding without detracting from the architectural integrity of the space. **Connect with ChromaLuxe today to start the journey towards enhancing your commercial environment.**

*While it is possible that bacteria could grow on our material, it's not a good host for growth. The highly crosslinked nature of our coatings will exhibit slower growth as compared to other types of competitive media and can be easily and thoroughly cleaned.
